

You will need:

Sharp hobby knife, white glue, tweezers

Not required but helpful: Vision magnification, water-thin CA glue ("super glue")

We strongly recommend that you coat both parts cards with a clear spray coating (either lacquer or enamel) before you begin building this kit. This will help keep the parts clean and allow for easy removal of glue as necessary.

1. separate the two parts cards from the packet.

2. on the thick card, carefully separate parts 10 - 14, the oil drum stand-

3. Carefully remove and discard the pieces inside the stand, leaving the framework. Cut part 18 from the thin sheet, too.

4. Assemble the stand as shown in the following sequence.

5. Glue part 14 to the bottom of part 18 before attaching them to the rest of the stand.

6. When finished, the stand should look like this.

7. From the thick card, carefully separate the framework for one barrel. Parts 1-5.

9. Glue part 2 on the same side of part 5 as the notches in 1 and 4. Glue part 3 opposite part 2.

Part 2 should have a small notch next to 5, just as 1 and 4. Use some paper to clean out any glue that may be in the notches

8. Glue 1 and 4 to each end of part 5. Note 1 and 4 have little notches. Make sure you place the notches on the same side of part 5. You'll thank me later!

10. Release part 15 from the thin sheet and make a crisp right-angle bend away from the marked surface. The bent portion should just fit into the three notches in the framework. Don't glue it yet.

11. Using something hard and round, pre-curve the barrel skin (part 15) by rolling it on a soft surface. Be sure the lines on the part are on the outside of the curve.
